

813 TRITICALE

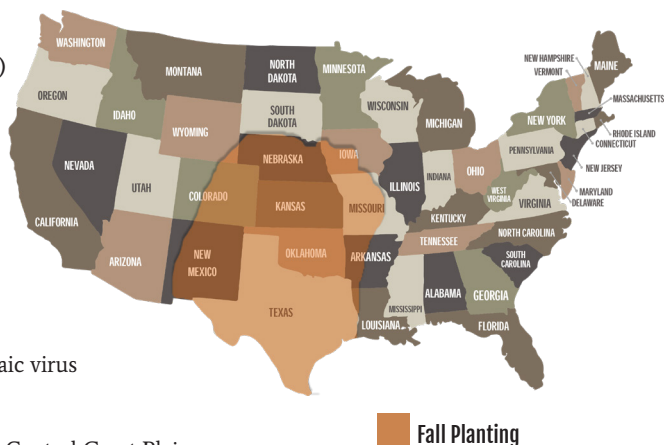

We prefer to grow and produce TriCal 813 for several reasons, standability, great disease resistance and high grain output. For the Dairies, Feed yards, Ranchers and farmers we provide seed to, it produces a great quality forage for grazing, silage, and hay with high protein and high tonnage that keeps 813 in their rotation and producers prefer it year after year.

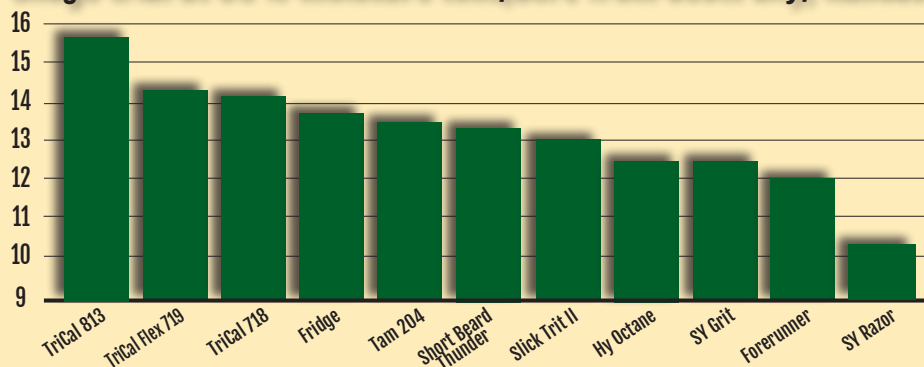

Chad, Hereford, TX

Key Attributes:

- Fall planting
- Awnletted (very short beards)
- Semi-erect fall growth habit
- Very good fall seedling vigor
- Good winterhardiness
- Medium maturity
- Good straw strength
- Tolerant of rust
- Tolerant of wheat streak mosaic virus
- High silage yields
- Adapted to the Southern and Central Great Plains

Silage trial at 65% moisture tons/acre from Scott City, Kansas
