

Trios 888 Cover Crop

Primary Uses:

- Trios 888 is the best choice for soil building in hard working vineyard, orchard and row crop land. It produces biomass below the surface of the soil using the powerful root system of triticale to penetrate soil layers with roots that provide channels for air and water.

Key Attributes:

- Awned
- Medium plant height
- Resistant to leaf rust
- Adapted throughout California
- Specifically bred for the improvement and maintenance of soil productivity
- Aggressive root system penetrates the compact soil layers, leaving channels after the plant dies
- Enhances water penetration and retention making it vital for improved irrigation management
- Produces low, dense above ground growth in the fall and winter making an excellent working surface for winter operations when workers and machinery need access to the trees or vines
